

# Knowledge Graphs

## Pascal Hitzler

Data Semantics Laboratory (DaSe Lab)  
Kansas State University

<http://www.daselab.org>

- **Postdoc:**
  - Cogan Shimizu
- **PhD Students:**
  - Aaron Eberhart
  - Abhilekha Dalal
  - Joseph Zalewski
  - Joshua Schwartz
  - Mohammad Saeid Mahdavinejad
  - Patrick Stingley
  - Reihaneh Amini
  - Rushrukh Rayan
  - Sanaz Saki Norouzi
  - Sulogna Chowdhury
- **Undergrad Researchers:**
  - Andrew Eells
  - Brayden Pankaskie

# Where (some) grad students went

- **Industry**
  - Amazon
  - IBM
  - Apple
  - GE Global Research
  - TigerGraph
- **Academia**
  - Wright State University, OH, USA
  - University of Hartford, NJ, USA
  - TU Dresden, Germany
  - IIIT Delhi, India
  - Universitas Indonesia, Jakarta
- **Elsewhere**
  - UN Headquarters, New York

# Data, data, data!

- **$2.5 * 10^{18}$  (quintillion) bytes produced each day as of 2021**
- **90% of the world's data was created in the last two years**
- **expected to double every two years**

<https://www.the-next-tech.com/blockchain-technology/how-much-data-is-produced-every-day-2019/>

# Data Integration and Re-use

- **data coming**
  - from different sources
  - in different formats
  - differently structured
- **If you need to use it for a combined purpose, you need to understand and integrate this data**
- **which is a lot of work.**
  
- **E.g. thousands of mentions of “John Smith”**
- **What exactly is Kansas City? (Missouri, Kansas or metro?)**
- **What is a forest?**
- **What does wind direction mean?**
- **What is Q6499080?**

**Data management is 80% of the effort/cost of data analysis!**

# How to organize data to make this easier?

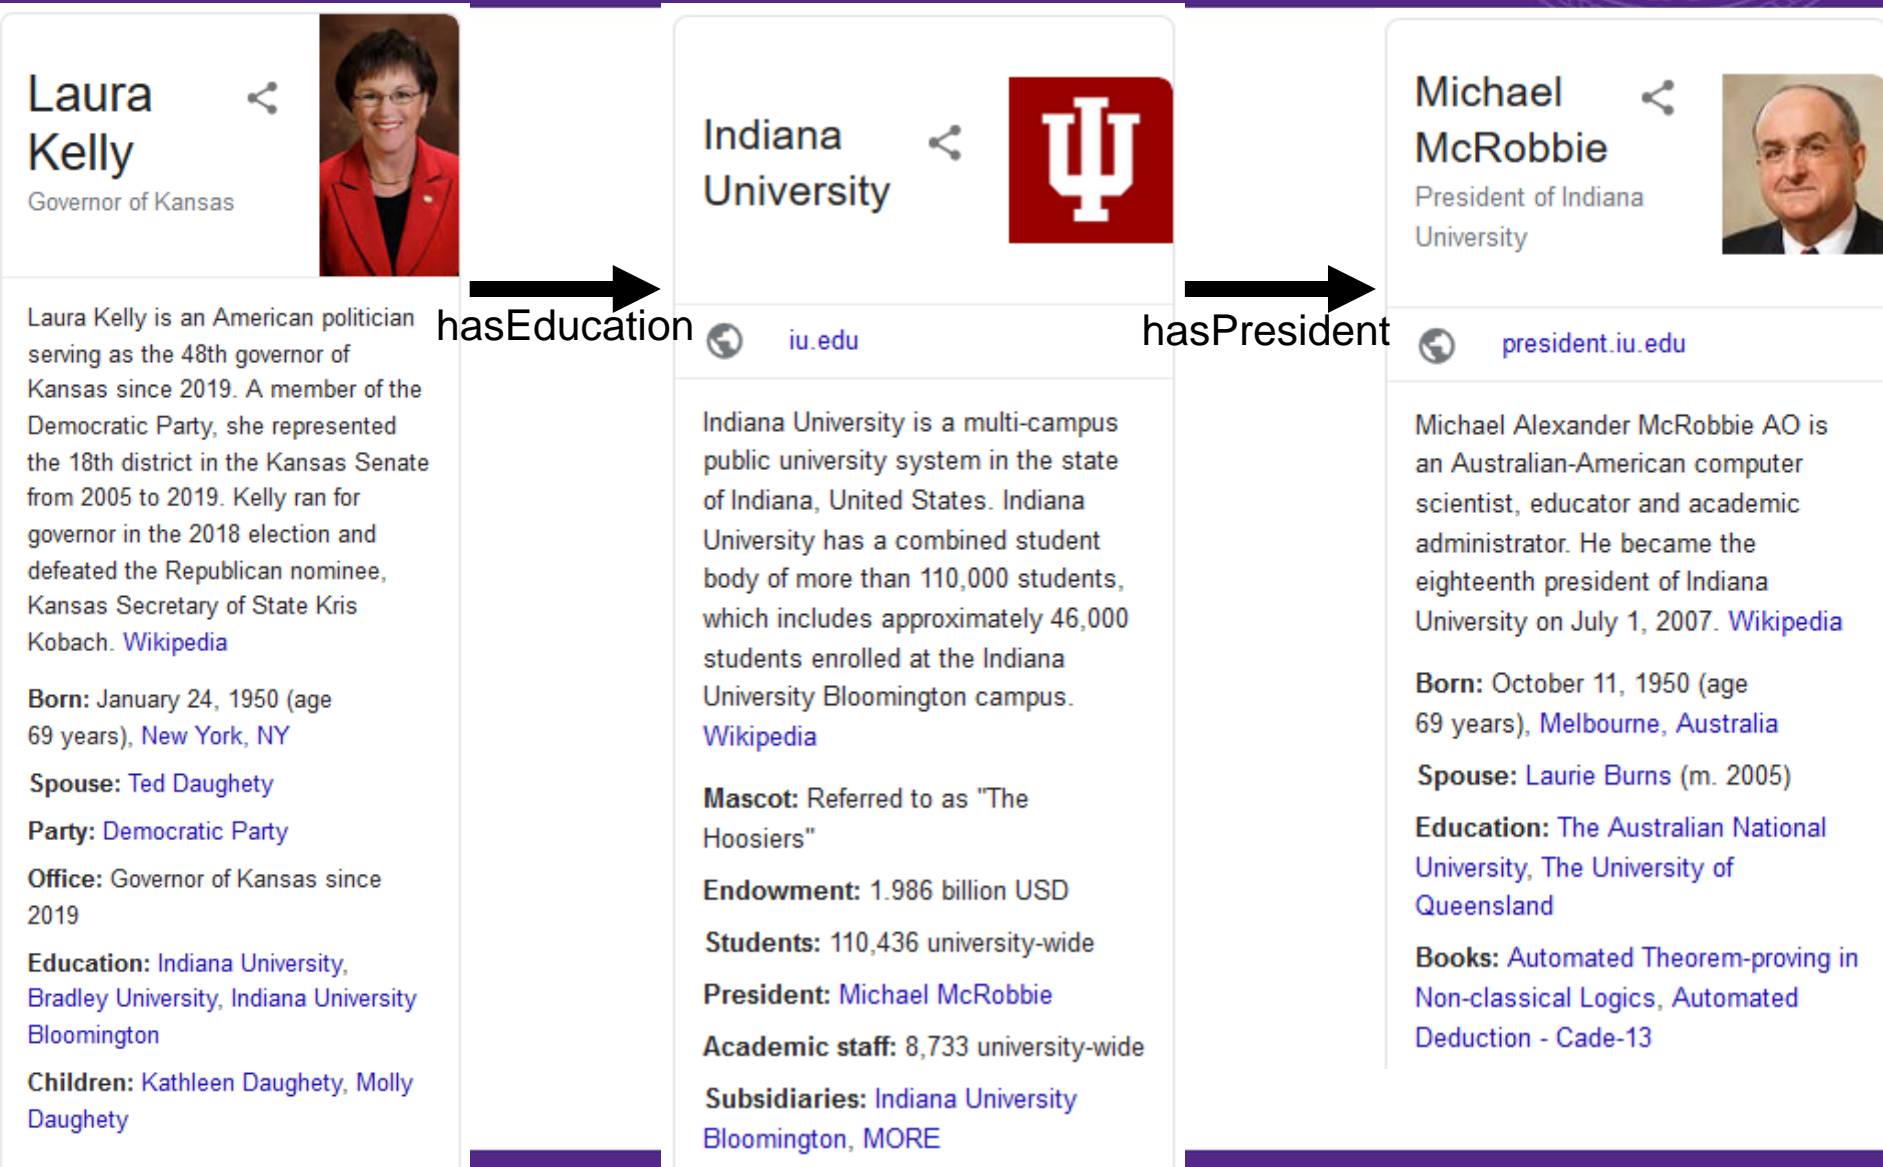

- **formal language**
  - **formal logic**
  - **tables**
  - **trees**
  - **graphs**
- 
- **Govern it all through standards and explicit agreements?**
  - **Use of metadata? (data that explains other data)**
    - **wind direction is “to”**
    - **Kansas City typed as “metro area”**

# Knowledge Graphs

- **labeled directed graphs (“meaning” labels on both nodes and edges)**
- **nodes are “typed”**
- **additional complex metadata is often used but we will not get into this today 😊**

# Google Knowledge Graph (live)

**Laura Kelly**  

Governor of Kansas

Laura Kelly is an American politician serving as the 48th governor of Kansas since 2019. A member of the Democratic Party, she represented the 18th district in the Kansas Senate from 2005 to 2019. Kelly ran for governor in the 2018 election and defeated the Republican nominee, Kansas Secretary of State Kris Kobach. [Wikipedia](#)

**Born:** January 24, 1950 (age 69 years), New York, NY

**Spouse:** Ted Daughety

**Party:** Democratic Party

**Office:** Governor of Kansas since 2019

**Education:** Indiana University, Bradley University, Indiana University Bloomington

**Children:** Kathleen Daughety, Molly Daughety

**Indiana University**  

[iu.edu](#)

Indiana University is a multi-campus public university system in the state of Indiana, United States. Indiana University has a combined student body of more than 110,000 students, which includes approximately 46,000 students enrolled at the Indiana University Bloomington campus. [Wikipedia](#)

**Mascot:** Referred to as "The Hoosiers"

**Endowment:** 1.986 billion USD

**Students:** 110,436 university-wide

**President:** Michael McRobbie

**Academic staff:** 8,733 university-wide

**Subsidiaries:** Indiana University Bloomington, MORE

**Michael McRobbie**  

President of Indiana University

[president.iu.edu](#)

Michael Alexander McRobbie AO is an Australian-American computer scientist, educator and academic administrator. He became the eighteenth president of Indiana University on July 1, 2007. [Wikipedia](#)

**Born:** October 11, 1950 (age 69 years), Melbourne, Australia

**Spouse:** Laurie Burns (m. 2005)

**Education:** The Australian National University, The University of Queensland

**Books:** Automated Theorem-proving in Non-classical Logics, Automated Deduction - Cade-13

### Welcome!

Wikidata is a free and open knowledge base that can be read and edited by both humans and machines.

Wikidata acts as central storage for the **structured data** of its Wikimedia sister projects including Wikipedia, Wikivoyage, Wiktionary, Wikisource, and others.

Wikidata also provides support to many other sites and services beyond just Wikimedia projects! The content of Wikidata is [available under a free license](#), exported using standard formats, and can be [interlinked to other open data sets](#) on the linked data web.

### Learn about data

New to the wonderful world of data? [Develop and improve your data literacy through content](#) designed to get you up to speed and feeling comfortable with the fundamentals in no time.

in knowledge graphs by defining a *schema* or *ontology*. For example, a link from a movie to its director must connect an object of type *Movie* to an object of type *Person*. In some cases the links themselves might have their own properties: a link connecting an actor and a movie might have the name of the specific role the actor

Knowledge graphs are critical to many enterprises today: They provide the structured data and factual knowledge that drive many products and make them more intelligent and "magical."

In general, a knowledge graph describes objects of interest and connections between them. For example, a knowledge graph may have nodes for a movie, the actors in this movie, the director, and so on. Each node may have properties such as an actor's name and age. There may be nodes for multiple movies involving a particular actor. The user can then traverse the knowledge graph to collect information on all the movies in which the actor appeared or, if applicable, directed.

Many practical implementations impose constraints on the links

**Editors:**

[Richard Cyganiak](#), [DERI](#), [NUI Galway](#)

[David Wood](#), [3 Round Stones](#)

[Markus Lanthaler](#), [Graz University of Technology](#)

Languages based on formal logic allow for automated (deductive) reasoning.

Corresponding algorithms are mathematically sophisticated and require formal correctness and complexity assessments.

Also:

The Standards need improvements!

## OWL 2 Web Ontology Language Primer (Second Edition)

W3C Recommendation 11 December 2012

**This version:**

<http://www.w3.org/TR/2012/REC-owl2-primer-20121211/>

**Latest version (series 2):**

<http://www.w3.org/TR/owl2-primer/>

# Plenty of open questions

- **What makes good knowledge graphs?**
- **What are good processes and tools for making them?**
- **What are strong intelligent algorithms for managing them, including**
  - **Automatic construction**
  - **Integration**
  - **Querying**
- **How do I make them self-explanatory?**
- **How do I use them in or with intelligent systems?**
- **What is the underlying theory/mathematics of the representation languages and (complex) algorithms?**

# Key research question (knowledge graphs)

- **Data management (discovery, integration, publishing, re-use) is a major cost factor in data-intensive applications.**
  - In particular, if data is multi-sourced and heterogeneous.
- **How can we save effort and cost for this data management?**
- **Research premise:**
  - The principled use of Smart Data (knowledge graphs and ontologies) saves effort and cost.**

**But how to exactly apply these methods best?**

A historical illustration in shades of blue and grey depicting a group of people, including men, women, and children, in a domestic or outdoor setting. One man stands in the center wearing a wide-brimmed hat, while others are seated or standing around him. The scene is rendered in a detailed, etched style.

# (some) project goals

- pushing the state of the art in spatiotemporal Knowledge Graph (KG) engineering
- transfer of KG technology towards adoptable practice
- application showcases

**Addressing the bottleneck in data science:**

**80% is data processing**  
**20% is deriving insights**

**<http://KnowWhereGraph.org/>**

## Forthcoming (very soon!) – public release

- **Knowledge Graph with >12B triples**
  - One of the currently largest public knowledge graphs.
  - Focus on spatial data related to environment and natural disasters
- (somewhat later)
  - open source software for access and management

[http://knowwheragraph.org/](http://knowwheragraph/)

Thematic Datasets					Place-Centric Datasets		
Dataset Name/ Theme	Source Agency	Key Attributes	Spatial Coverage	Temporal Coverage	Place-Centric Dataset	Defining Authority	Spatial Coverage
